

Omega 3 fatty acids to reduce risk of early birth: *identifying and treating the women most likely to benefit*

Tuesday 17th November 2020

3 pm – 4 pm

Zoom webinar, register via [link](#)

On World Prematurity Day, we invite you to hear the latest data about omega-3 fatty acids and prematurity and how clinical guidance is changing to optimise benefits for women and their babies.

SA Pathology and the SA Health and Medical Research Institute (SAHMRI) are partnering to offer omega-3 first trimester screening from 2021 for women with singleton pregnancies. This will identify women requiring supplementation to reduce their risk of early birth.

There will be a 30 minute presentation by **Professor Maria Makrides** followed by a Q&A with a group of expert panelists to answer any questions you may have.

Panel Members:

- **Prof Maria Makrides**, Deputy Director and Theme Leader for SAHMRI Women and Kids
- **A/Prof Philippa Middleton**, Principal Research Fellow, SAHMRI
- **A/Prof Rosalie Grivell**, MFM Subspecialist & Academic Head, Department of Obstetrics & Gynaecology, Flinders Medical Centre
- **Dr Janice Fletcher**, Clinical Director of Genetics and Molecular Pathology and Deputy Executive Director of SA Pathology

Zoom details will be sent to all who have registered 1 week prior, and again 1 day prior to the webinar.
